

Achieve your journey to net zero carbon with Expel

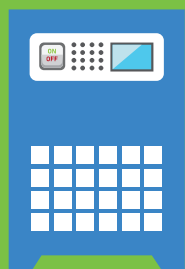

Expel does not
require ANY
replacement
filter elements

This eradicates the wastage
generated by traditional filters
and the need for maintenance
companies to come and service
these filters, therefore reducing
carbon emissions.

Expel may
eradicate the
need for a
refrigerant dryer

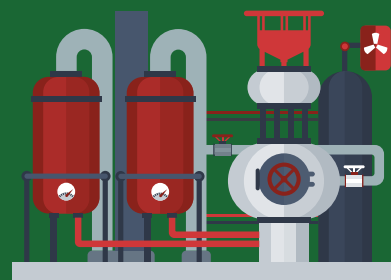

Refrigerant dryers
require electricity to
run, have a huge global
warming potential and
increase the volume of
wastage that will one
day end up in landfills.

Expel increases
the life cycle of
pneumatic tools
and equipment

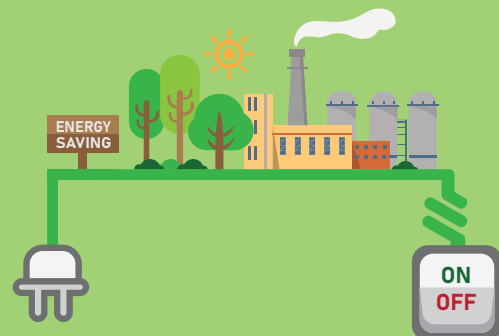

This prevents
equipment and
machinery turnover
as much as possible

Expel needs NO
electricity or
any other
consumables
to run

More energy efficient
than ALL other solutions
to the problem of liquids
and solid particulates in
compressed air lines.

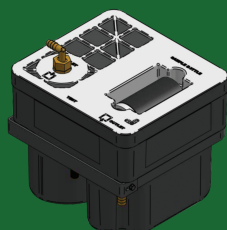

Extremely low
pressure drop
(max.0.1 bar)
which remains
consistent

As traditional filters
become saturated,
they gradually
become more and
more energy draining.

Environmental
waste treatment
disposal box
available as an
extra

The AVG oil separator
2 separates the waste
that been removed by
Expel so you can
dispose of any
oil safely.
